Play Schema Theory

Gender schema theory suggests that young children are influenced by society's schemas. These gender schemas are used to organize and direct the child's behavior. The learning objective is for students to be able to evaluate schema theory. Please note that according to Piaget, how do schemas play a role in learning?

To give some examples of schemas in play, connecting children enjoy train track. I am pleased that I found this page; it really summarizes the theory well.

This is a sample of our (approximately) 3-page long Gender Schema Theory notes. Appropriate behavior depends on schemas, e.g., girls don't play with trains. Schemas are patterns of repeatable behavior which can often be noticed in children. Although children often show particular schemas in their play, not all children do. Their play was based on (and reflected in) Sandra's gender schema theory and her writings on gender and learning. They encouraged both children to play with a variety of toys.
